

Communication & Collaboration suite

Linq brings together critical infrastructure, people, processes and devices onto one secure operating system. Our smart, scalable software solutions optimise workflows, keep hospitals compliant, and costs under control. Built on **LinqOS**, Australia's first hospital operating system, we streamline healthcare communication, enhances collaboration, and automate operational processes.

Empower clinicians to deliver well-coordinated care with better communication & collaboration.

Ensure staff safety in emergencies by connecting systems for instant critical information access.

Boost efficiency by instantly providing accessible rosters for staff and clear switchboards for emergencies.

Drive automated outcomes by collecting information from both legacy and modern systems, enabling informed, data-driven decisions.

Enhance operational efficiency with Linq's seamless integration into hospital facility systems, supported by over 100 diverse adapters.

Leap to a smarter hospital, faster.

Reduce Clinical Burden • Improve Staff Safety

Hospital Communications

Instantly connect with the right hospital staff using role-based search. Linq eliminates the need for non-secure apps like iMessage, Messenger or Whatsapp.

Incident Management

Monitor medical emergencies (code blue), threats (code black), and operational issues remotely. Receive instant alerts for rapid responses and smart operations.

Task Management

Organise and prioritise tasks. Whether it's coordinating patient care or allocating resources, task management enables staff to make the most of their time.

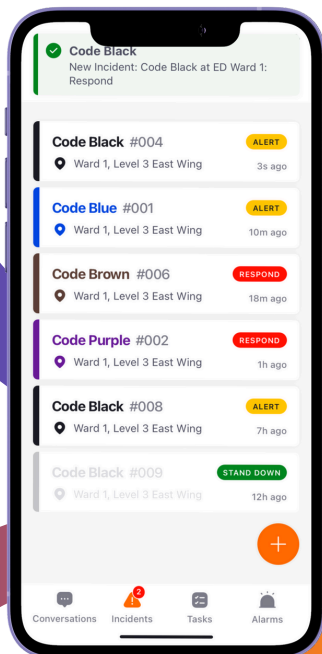

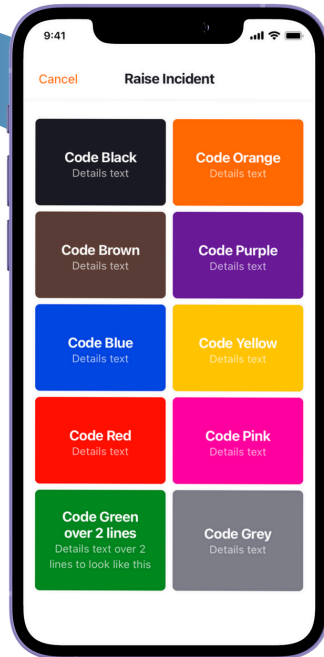

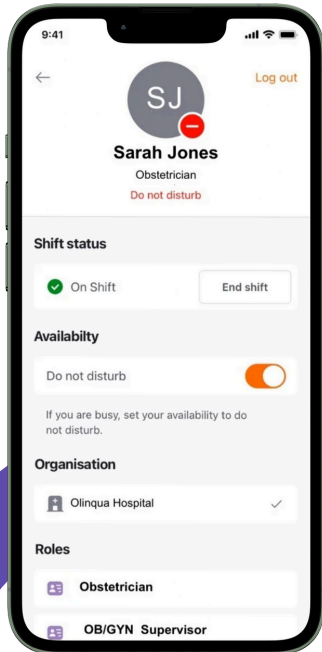

Environment Monitoring

Enjoy peace of mind and save time as Linq monitors and automatically notifies about temperature irregularities, alerting the responsible staff to take action.

Location Tracking

Get immediate, automated notifications on the whereabouts of crucial equipment. Improve staff and patient safety by enabling location sharing during emergencies.

Chasing efficiency? Close the gap between clinical and operational.

Enhances care delivery by bridging the gap between clinical and operational data through closed-loop communication across care teams and shifts.

Save time by consolidating alerts and alarms from third-party devices and systems into a single source of truth through automated processes.

Reduce delays, minimise errors, and boost productivity with context-aware messages delivered to the right person, at the right time on the right device.

Optimise staff safety, resource and asset management decisions by tracking medical equipment and device locations.

Eliminate manual checks on critical hospital infrastructure with remote monitoring through smart environmental detection, ensuring faster response times, improved system reliability, and enhanced operational efficiency.

Leap to a smarter
hospital, faster.
